

Project Management 101: Project Training for Operations and Maintenance People

Overview

A practical project management and project leadership course customized for Operations and Maintenance People. You will learn the fundamentals of project management and project leadership by creating a real-world project plan for a case study you select during the session. Through practical exercises, you'll leave with an actionable plan ready for implementation, and templates and examples you can use over and over again.

You will also learn how you can best support the execution of major capital projects at your facility. Supporting these projects effectively will help the major capital project team deliver what is expected and agreed to by Operations and Maintenance, and the value expected at In-Service.

This course has been delivered in-person many times and has been very well reviewed, regularly scoring as a 9/10 in anonymous feedback provided by participants.

Facilitator: This is an e-Learning course facilitated by Douglas Noullet, from [Leadmark Project Delivery](#). He is a successful project professional with 47 years of experience across multiple industries including farming, Canada's Navy, consulting, and the upstream and mid-stream oil and gas industries.

Format: e-Learning

Duration: 3-5 Hours

Target Audience:

- Operations and Maintenance people leading projects in the field or wanting to develop the skills to do so.
- Facility and Area leaders who want to effectively lead field projects.

Pre-Work:

Identify a project you want to use as the case-study for the course. You will use the case-study during the many practical exercises used during the course to reinforce learnings and develop a plan to execute the project.
